

New 1.5mtr, 8.3mm Video Endoscope

In continuing to grow and evolve our range of innovative Endoscopy equipment, EV Veterinary is proud to announce the launch of the new 8.3mm video endoscope with a 2.7mm biopsy channel. The combination of the narrow diameter whilst retaining the 2.7mm allows the following:-

- Ease of use with equine foals and miniatures
- Used in mixed practices particularly for canine Gastroscopy
- Compatible with the existing EV video endoscope system

We believe this is the first scope of its kind to be launched to the veterinary market, for a demonstration, please contact head office or Sarah and Martin directly to learn more. This system has recently been supplied to the Animal Health Trust, Vale Vets & Bransby Home of Rest for Horses.
