

Endoscopy

EV are continually developing their range of Upper Airway Diagnostic equipment. The EV Digital Video Endoscopy system is now widely used in leading equine practices and academic institutes both in the UK and Europe. The stand alone "Docucentre" includes a user friendly software system called Endodata. Images can be saved as JPEG, TIF or BNP files and videos as mpegs. They are easily exported, can be burned to CD, DVD, memory stick or direct to your server on the network. Some of the main features of the "Docucentre" include:-

- Integrated Xenon lightsource
- Dicom Conformant
- Endodata Patient management software
- Water/air pump
- Completely portable

The system is being continually developed with the recent addition to the range of an 8mm diam, scope with a 2.7m biopsy channel.

The high quality images produced with our unit ensure that the practitioner can make a clear diagnosis and assessment of his case.

We are continually adding to the endoscopy range to ensure we can offer you the complete range, new to us is a selection of both reusable and disposable endoscope forceps and trach wash tubing. Our prices are extremely competitive, so please see our on-line store for the complete range.

To complement the Endoscopy products we also have available a 980nm Diode Laser, which is compatible with the video endoscopes.

EV offer a full demonstration, commissioning and servicing facility with all their diagnostic equipment.
